

IGP Lazerline DS range

Lazerline D-S film processors are designed for today's films. Capable of developing the D-max achieved by imagesetters and scanner output without loss of definition. There are 7 width options to suit your requirements. A large daylight loader for offline applications that will accept all known output cassettes.

Versatile Remote Control

The D-S Series Remote Control gives you total flexibility. It can be fixed anywhere on the processor, on the wall, in fact in any convenient position you choose, within the limits of its umbilical cord. Easy to read controls give instant readouts of set temperatures, speeds and drying levels. A digital output shows actual developing time in seconds. This type of control offers the freedom and convenience of where to site your processor to provide maximum space advantage.

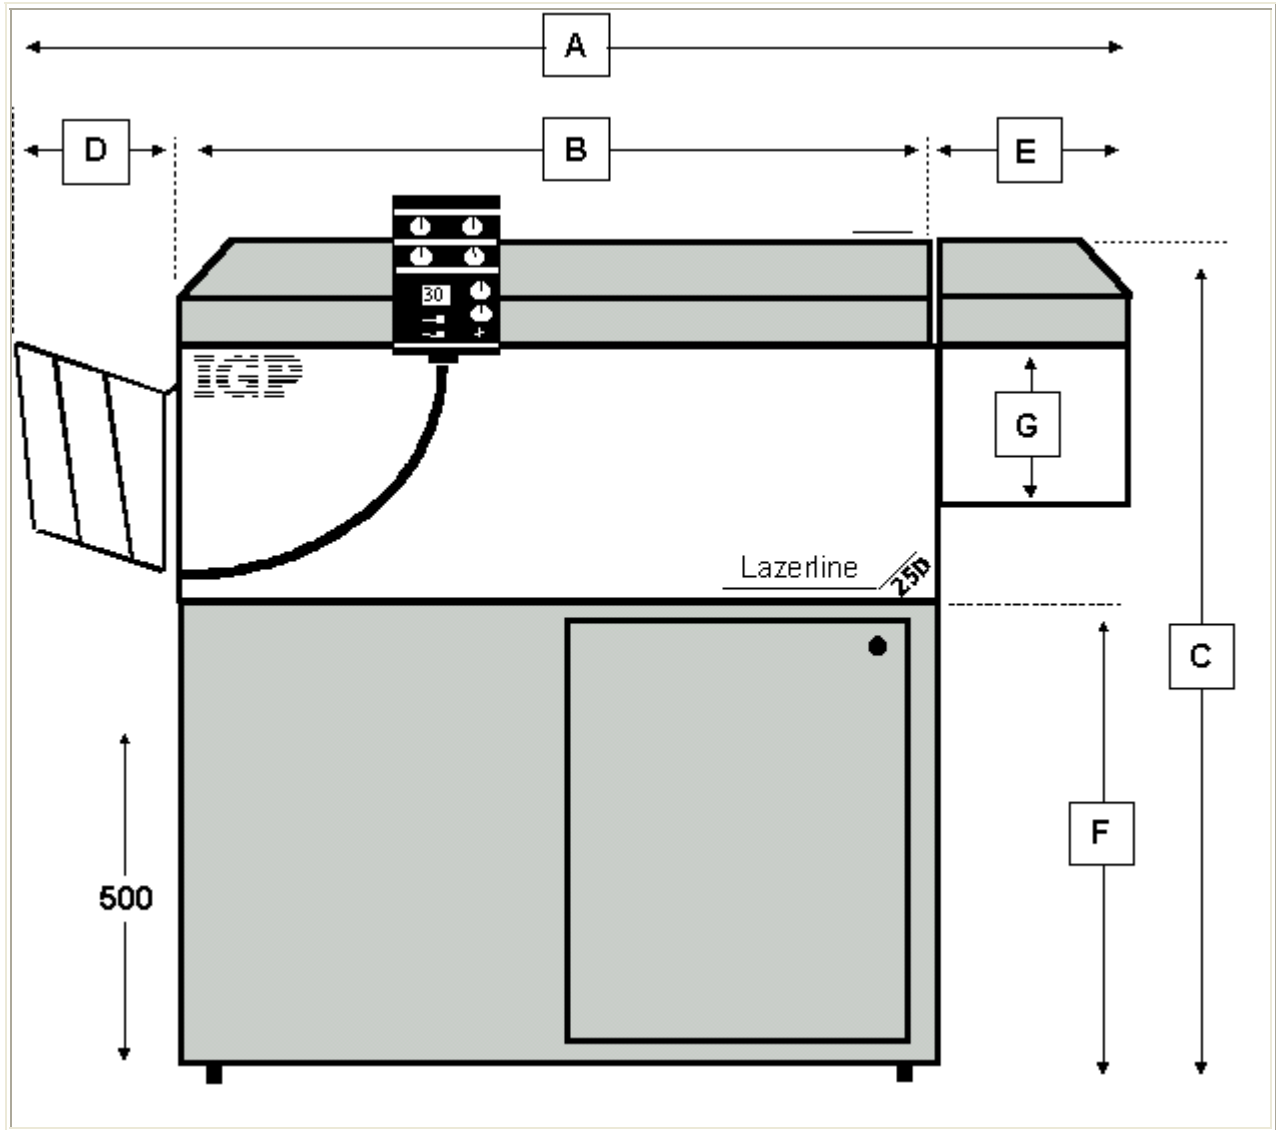

Designed To Set The Standard

The D-S range has been designed and built to exacting European Standards: Precision engineering offers excellent reliability and the clean lines and modern colour scheme ensure they will look at home in any environment. Installation couldn't be simpler - either online to almost any scanner or imagesetter or with a large capacity daylight loader for stand alone offline operation.

- **8 Size Options**
- **All with Closed Stand**
- **High Capacity Catch Tray**
- **Large Daylight Loader**
- **Microprocessor Controlled**
- **Online Compatible**
- **Remote Control**
