

MICROTEK A3 SCANMAKER 9800XL PHOTO FW SCSI USB

SCANNER + TMA

The ScanMaker 9800XL has a large 17" x 12" scanning area with a high 1600 x 3200dpi resolution to cover almost all reflective scanning requirements.

The maximum density of 3.7D captures huge amounts of subtle highlight and shadow details, with accurate colour values, thanks to the new 48-bit CCD sensor and the inclusion of multi-sampling. The transparency adaptor also includes a set of film templates for 35mm slides, 35mm strips, medium format film and 5" x 4" film. Extra holders can be purchased.

To cover almost all connectivity requirements, three interface options are included as standard, FireWire, SCSI-2 and USB 1.1. A PCI FireWire card for Windows and cable, plus a USB cable are also included. Windows NT users can also use this scanner with the addition of a SCSI card and cable.

The ScanMaker 9800XL includes a powerful software suite. Adobe Photoshop Elements, LaserSoft SilverFast Ai 5.5 (IT-8), ABBYY FineReader Sprint OCR and Ulead PhotoExplorer are all included for both Macintosh and Windows. Windows users can also benefit from the ScanWizard Pro Network Scanning solution that allows several PCs to share this scanner over a local area network.

Features:

- 1600 x 3200 dpi optical resolution.
- 12800 x 12800 dpi interpolated.
- 48-bit depth.
- 3.7D max density.
- FireWire, SCSI-2 and USB 1.1 connectivity.

Requires:

Mac:

- 128MB RAM
- FireWire: Mac with FireWire port, OS 9.x.
- SCSI-2: PowerPC (non iMac) SCSI support, OS 8.1 to 9.x.
- USB: PowerPC with USB, Mac OS 8.6 to 9.x.

PC:

- 128MB RAM
- FireWire: Pentium II, PCI slot, Win 98SE/2000/Me/Xp.
- SCSI-2: SCSI card, Pentium PC, Win 95/98/2000/Me/NT 4.0.
- USB: Pentium with USB port, Windows 98/2000/Me/Xp.
